Optical Communication Systems

- Introduction
- Optical Fibers
  - Geometrical-Optics Description
  - Wave Propagation
  - Chromatic Dispersion
  - Polarization Mode Dispersion
  - Dispersion-Induced Limitations
  - Fiber Losses
  - Nonlinear Optical Effects
- Optical Transmitters
  - Light-Emitting Diodes
  - Semiconductor Lasers
  - Control of Longitudinal Modes
  - Laser Characteristics
  - Transmitter Design
- Optical Receivers
  - Common Photodetectors
  - Receiver Design
  - Receiver Noise
  - Receiver Sensitivity
  - Sensitivity Degradation
  - Receiver Performance
- Optical Amplifiers
  - Semiconductor Optical Amplifiers
  - Raman Amplifiers
  - Erbium-Doped Fiber Amplifiers
  - Parametric Amplifiers
  - System Applications
- Multichannel Systems
  - WDM Lightwave Systems
  - WDM Components
  - WDM System Performance Issues
  - Time-Division Multiplexing
  - Subcarrier Multiplexing
  - Orthogonal Frequency Division Multiplexing (OFDM)
  - Code-Division Multiplexing
- Coherent Lightwave Systems
  - Homodyne and heterodyne detection
  - Optical hybrids and balanced receivers
  - Modulation formats: ASK, FSK, PSK, QAM
  - Demodulation schemes
  - Polarization diversity
  - Polarization multiplexing
  - Coherent OFDM systems
  - Bi-error rates and receiver sensitivity
  - Sensitivity degradation
  - System performance

- Optical Transmission Enabling Technologies
  - Dispersion Management
  - Modulation Schemes
  - Nonlinearity Management
  - Wavelength Conversion
  - Optical 3R
  - Forward Error Correction
- Optical Networks
  - LANs
  - MANs
  - Long-Haul Networks
  - Design Guidlines
